

IMPULSE Manual Guide

Our **promises**

Privacy

One of the core values of IMPULSE is privacy. You can rest assured; all your information is completely safe. When you buy the phone, you use your private key to generate a unique number, which represents your own digital ID.

Security

All the communication is fully encrypted, from text, to voice, photo, document or video. The end to end encryption eliminates third parties and only relies on peer to peer links. This means absolutely nobody else can access your information.

Decentralised

IMPULSE doesn't rely on one central point of authority as the traditional smartphone. Instead of being kept on a server, all the information is distributed across many different devices, guaranteeing the privacy of our users.

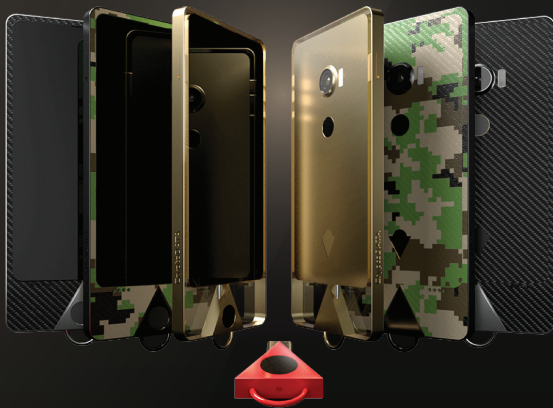

Innovative Technology

IMPULSE is the first phone to use blockchain technology in an innovative way, in order to ensure every user's safety. This is an exclusive technology, only available for our customers.

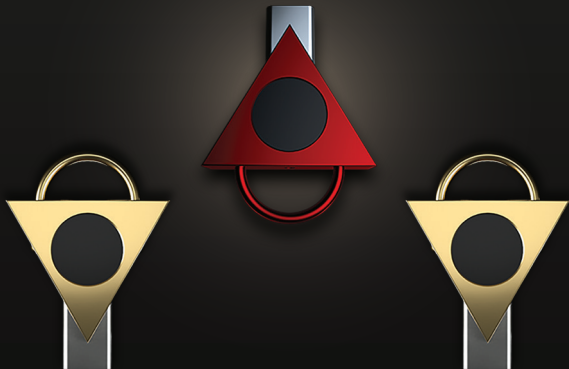

PRIVACY

IS THE NEW
ORDER //

UNIQUE IDENTITY

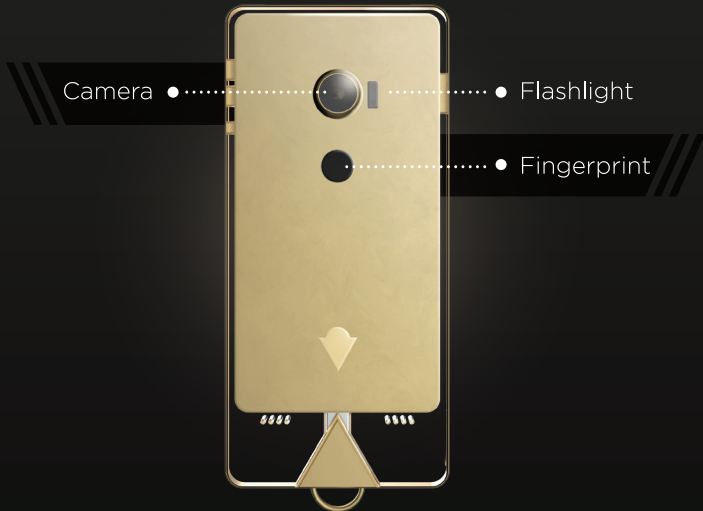

The IMPULSE smartphone comes equipped with a physical key, unique for each model. Your private key is part of the innovative CryptoDATA technology, useful for accessing your blockchain data. Moreover, you are going to be verified and granted access based on it.
